

Environmental Commitment Statement

GreenElec is a multidisciplinary electrical and solar contracting business located in the heart of Sydney's Northern Beaches servicing Sydney and wider locations for all residential and commercial electrical needs. GreenElec is a well established and driven small business bringing the latest technologies, expertise and motivation to every client, every job and every moment we are on site.

"WE ARE SERIOUS ABOUT PROTECTING AND ENHANCING THE NATURAL, BUILT AND HUMAN ENVIRONMENT"

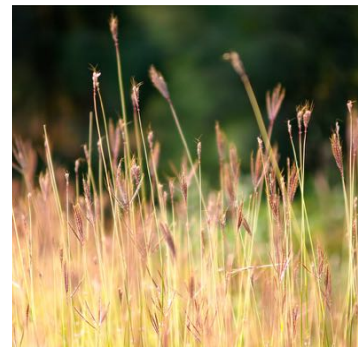

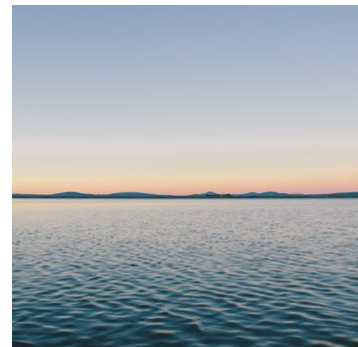

We recognise that a successful future for our business depends on sustainability of the environment, community and economies in which we operate. As an electrical contracting business we are committed to positively contribute to our surrounding sustainability but most importantly empower our clients along the way. As experts in the electrical and solar industries we plan to share our knowledge for the benefit of individuals, communities and economies as a whole.

Our objectives:

- > Oversee the implementation and effectiveness of GreenElec's projects and the alignment to the company's Environmental Commitment Statement (ECS);
- > Review the appropriateness of our company's risk management and risk monitoring process and programs as they are developed, implemented and maintained;
- > Establish operational processes which will facilitate compliance with relevant laws and regulations in the electrical and solar industries as they evolve and change to continuously improve the performance of our environmental responsibilities.

Our commitment:

- > Plan our operational processes to incorporate responsive environmental management principles and practices into our consultation, design, construction, operation and maintenance phases;
- > Work collaboratively with regulators and in compliance with environmental laws in every operational phase of our engagement with the customer;
- > Take a leadership role within our community to engage in environmental and electrical education forums, panels and ongoing training opportunities to foster industry-wide best environmental outcomes;
- > Implement and strive for resource efficiency and paperless operations;
- > Support and encourage the selection of materials that are safe, recycled or reused, have low embodied energy and have a reduced impact on resource depletion;
- > Provide our employees with information, training and the support they require to meet the objectives of our ECS and foster their personal commitment and involvement;
- > Continually monitor and measure our performance and utilise the collected data as input to improve our company's operational processes.
